

## Premier Global Infrastructure Trust

Information as at 31 May 2020

## Investment objectives

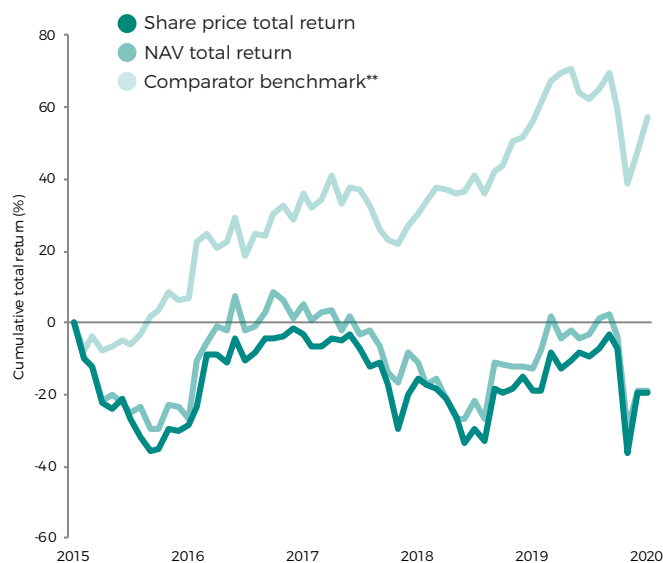

The Company's investment objectives are to achieve a high income and to realise long-term growth in the capital value of its portfolio. The Company will seek to achieve these objectives by investing principally in the equity and equity-related securities of companies operating primarily in the energy and water sectors, as well as other infrastructure investments.

## Fund manager's comments

Markets continued their recovery in during May, with utilities and infrastructure broadly in line with equities generally. June has also started well with markets looking through to a post lockdown economic recovery, fuelled by more than ample market liquidity. After a very strong out-performance during April they continued their recovery in May, the Trust's NAV under-performed slightly, gaining 4.6% over the month.

The main area of under-performance was the Chinese investments held via the Hong Kong exchange. The new Hong Kong security laws, expected to be passed by the Hong Kong legislature later this year, have rattled investor confidence. The underlying businesses of all the Trust's holdings are in mainland China, and should not therefore be particularly affected in the short term. However, the reaction of the US to the heightened Chinese control of Hong Kong could be a headwind for all shares listed in Hong Kong.

For the most part, Q1 results have been relatively uneventful for the portfolio. Where results have been below par this has tended to be on account of factors other than the global coronavirus lockdown.

The Trust remains partially hedged on currency exposures, with a net sterling exposure at a similar level to the ZDP share liability which crystallises in November. This detracted from performance over the month with sterling losing ground as Brexit talks reached an impasse.

## Top 15 holdings (total number of holdings: 46)

	Sector	Region	Portfolio
Atlantica Sustainable Infrastructure	Renewable energy	Global	8.7%
Northland Power Income Fund	Renewable energy	Global	7.3%

Top holdings are calculated as a percentage of gross assets. Please note that the figures above may be above or below 100% due to rounding.

# Premier Global Infrastructure Trust

Information as at 31 May 2020

## Share class information

Ordinary shares	
Share price	110.0p
NAV	118.2p
Discount	-6.9%
Gearing (excluding current period revenue)	143.3%
ZDP shares	
Repayment date	30/11/2020
Share price	120.0p
NAV	122.7p
Discount	-2.2%
Redemption value	125.7p
Gross redemption yield	9.6%
Hurdle rate	-40.4%
Cover	1.6x

The ordinary shares are geared by the ZDP shares which have a fixed entitlement to capital and rank ahead of the ordinary shares for repayment on a winding up of the Trust. The current gearing level is shown above.

The effect of gearing is that the NAV of the ordinary shares is expected to rise faster than the increase in the gross assets of the Trust in a rising market but fall faster than the decline in gross assets in a falling market. This increases the risks associated with investing in the ordinary shares but enhances the potential return. As the ZDPs have no entitlement to dividends, the ordinary shares have the potential for a higher dividend than would be the case if the Trust was ungeared.

The ZDPs can be considered as a more defensive and lower risk investment than the ordinary shares but their potential return is limited to their accrued capital entitlement. The potential return, if held to redemption, is shown by the gross redemption yield. The cover and hurdle rate are shown to enable the risk characteristics of these shares to be assessed.

## Announcements

There were no major announcements this month.

## Non-complex investments

The Directors of the Premier Global Infrastructure Trust consider that both the ordinary shares and the ZDPs are non-complex investments for the purpose of the MiFID II regulations.

## Statement regarding non-mainstream investment products

The Company currently conducts its affairs so that both the Ordinary shares and Zero Dividend Preference shares issued by the Company can be recommended by financial advisers to retail investors in accordance with the FCA's rules in relation to non-mainstream investment products and intends to continue to do so for the

foreseeable future. Premier Global Infrastructure Trust's shares fall outside the restrictions which apply to non-mainstream investment products because it is an investment trust.

## Costs and charges

Ongoing charges figure*	1.66%
Of which annual management charge	0.75%
Transaction costs**	0.83%

\*The ongoing charges figure (OCF) is not the same as the ongoing costs figure set out in the Company's key information document. The key differences are that gearing costs and portfolio transaction costs are not included in the OCF. In addition costs are calculated on slightly different bases. The OCF figure set out above mirrors that in the Reports and Accounts and is based on costs incurred in the year which are likely to recur in the foreseeable future. The ongoing costs figures in the key information document provide investors with the impact costs have had on returns averaged over the five year recommended holding period.

\*\*The impact of the costs of the Company buying and selling underlying investments, based on the methodology used in the key information document.

For more information about the impact of costs and charges on your investment, please read the **Key Information Document**.

All data quoted to 31 May 2020, unless stated otherwise.

## Definitions

**Cover:** The ratio by which the shareholder's redemption value is currently covered by those assets of the company available at wind-up.

**Hedge:** An investment which aims to reduce the risk of adverse price movements in an asset or group of assets. Normally, a hedge consists of taking an offsetting position in a related security, such as a futures contract.

**Hurdle rate:** This shows the compound annualised growth rate in total assets required to return the pre-determined redemption price or, for shares without a pre-determined redemption price, to repay the current share price.

**NAV:** Net Asset Value per share.

**Yield:** Dividend payments made in the preceding 12 months, divided by the share price at the end of the month, expressed as a percentage.

**Zero Dividend Preference shares gross redemption yield:** The internal rate of return, expressed as an annual percentage, assuming the share is bought at the current share price and repaid at the pre-determined redemption price.

## Investment risks

Reference to any particular stock does not constitute a recommendation to buy or sell the stock.

The value of investments may fluctuate which will cause fund prices to fall as well as rise and investors may not get back the original amount invested.

The performance of information presented in this document relates to the past. Past performance is not a reliable indicator of future returns.

Future forecasts are not reliable indicators of future returns.

### General risks

All types of investment carry a degree of risk and it is important that you understand and are comfortable with the level of risk to which your capital could be exposed. We recommend that you consult with a financial adviser if unsure in any way.

Inflation could erode the relative value of your investment.

There is a risk that financial markets will fall, affecting the value of your investment.

There is no guarantee that the investment objective will be achieved.

Past performance of is not a guide to future returns. The price of shares and any income from them can go down as well as up and there is the possibility of a loss to your original investment.

The levels of taxation and of relief from taxation will depend upon individual circumstances.

There may be a variation in the performance between investments with similar objectives due to the different assets selected.

Performance will be affected by the fund managers' investment decisions.

## Other investment risks

This trust may invest directly into, or be exposed to via its underlying investments, a variety of assets which carry specific risks which could impact the returns from the trust. The main risks are summarised here.

**Currency:** Where investments are denominated in currencies other than sterling, changes in exchange rates may cause their sterling value to rise or fall.

**Currency forward contracts:** Typically used to help reduce the impact of currency movements, but could also expose the trust to volatile returns from time to time.

**Emerging market countries:** Some markets in less developed countries carry higher risks than more developed countries.

**Equities:** As an asset class, equities can experience high levels of fluctuation in prices.

**Fixed interest securities:** This type of asset, which includes government and corporate bonds, is particularly affected by movements in interest rates. If interest rates rise, their price may fall, and vice versa.

**Gearing / leverage:** Investments that use gearing / leverage will experience higher price fluctuations.

**Industry concentration:** Investment trusts that have a strong focus on a particular industry, can carry a higher risk than those with a more diversified portfolio.

**Inflation:** Higher inflation can negatively impact investment markets, in particular, fixed interest securities such as government bonds and corporate bonds.

**Infrastructure:** Investments in this sector can be significantly affected by changes in the supply of, demand for and the price of, natural resources and commodities. They can also be significantly affected by government regulations, changes in economic regulation and broad macro-economic conditions.

**Interest rate:** Unexpected movements in interest rates will affect all types of assets, in particular, fixed interest securities such as government bonds and corporate bonds. If interest rates go up, the value of the bond may fall, and vice versa.

**Issuer credit:** Where the issuer of a security is unable to make income payments or repay its debt.

**Legal/tax:** Arising from a change in legal/tax regulations or the application of them.

**Liquidity:** During difficult market conditions, securities may become more difficult to sell and buy at a desired price.

**Operational:** Processes, systems and controls can fail. This is more likely to happen with more complex products or investments in overseas markets, such as emerging market countries, which may not have the same level of safekeeping, infrastructure or controls as more developed markets.

**Smaller companies:** Investment in smaller companies is typically higher risk than investment in larger companies.

**Sub-investment grade bonds:** These have lower credit ratings than investment grade bonds and therefore carry a higher degree of issuer default risk.
